Dear Hiring Manager,

My name is Michael Green, and I am a student at the University of Michigan's College of Engineering. I am majoring in Computer Engineering and Entrepreneurship - the intersection of technology and people is my calling. I believe that - given both my traits and past experiences - I can be a strong addition to your team.

During my time at a start-up called Skinno, I gained a substantial amount of experience working independently on front end iOS development, working on the bridge of software and design. I constantly coordinated with a multitude of team members ranging from the back-end developers to designers - polishing not only my coding skills but communication skills as well.

During my time at Skinno, I was also gaining traction on my side project: coding classes. To keep my classes sustainable yet accessible and free, I was constantly approaching different libraries pitching my classes - competing for time and resources. I was then able to use these connections to develop marketing strategies within the library. I leveraged these connections to pitch other libraries - later winning two awards from the Nassau County Library Association. I wore many "hats" including program management, marketing, and teaching.

Currently, I am working for GRIP research labs at the University of Michigan where I have streamlined their research activities through database development. I constantly work across multiple projects within the group, catering to each project's needs. I often communicate with and interview team members to develop data structures and layout design. During my time here, I have greatly improved my communication skills as well as my knowledge in design and database structures.

On top of my ability to work with others, I think my best qualities are my drive and discipline. In a couple of years, I have gone from someone with no coding experience to someone who has published 2 apps, developed 3 websites, worked at a start-up, as well as directing my own classes. None of it would have been possible without my dedication to learning - both through self-teaching and courses. I love learning and being challenged - finding a way to improve myself in every experience.

Thank you in advance for your time and consideration. I eagerly await your response!

Sincerely,
Michael Green

My Summary:

I am a driven, hard-working teammate. There has never been a challenge I can't defeat - not because I'm the smartest, but because I work the hardest.
